Particle physics “specials”

Very nice, dear colleague

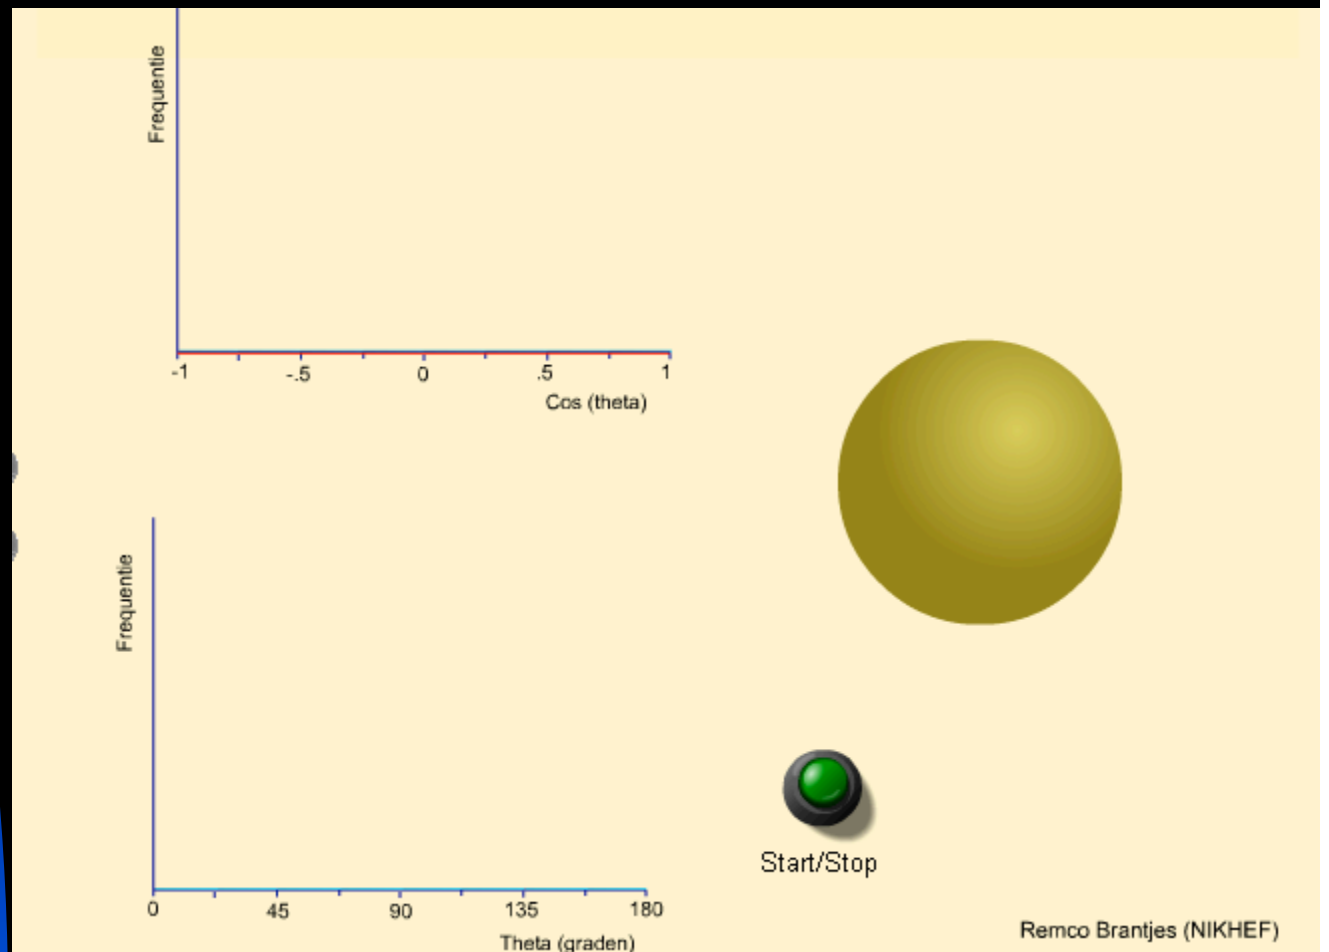

... but does it also work in theory?

Particle collisions: *cross section*

Cross section

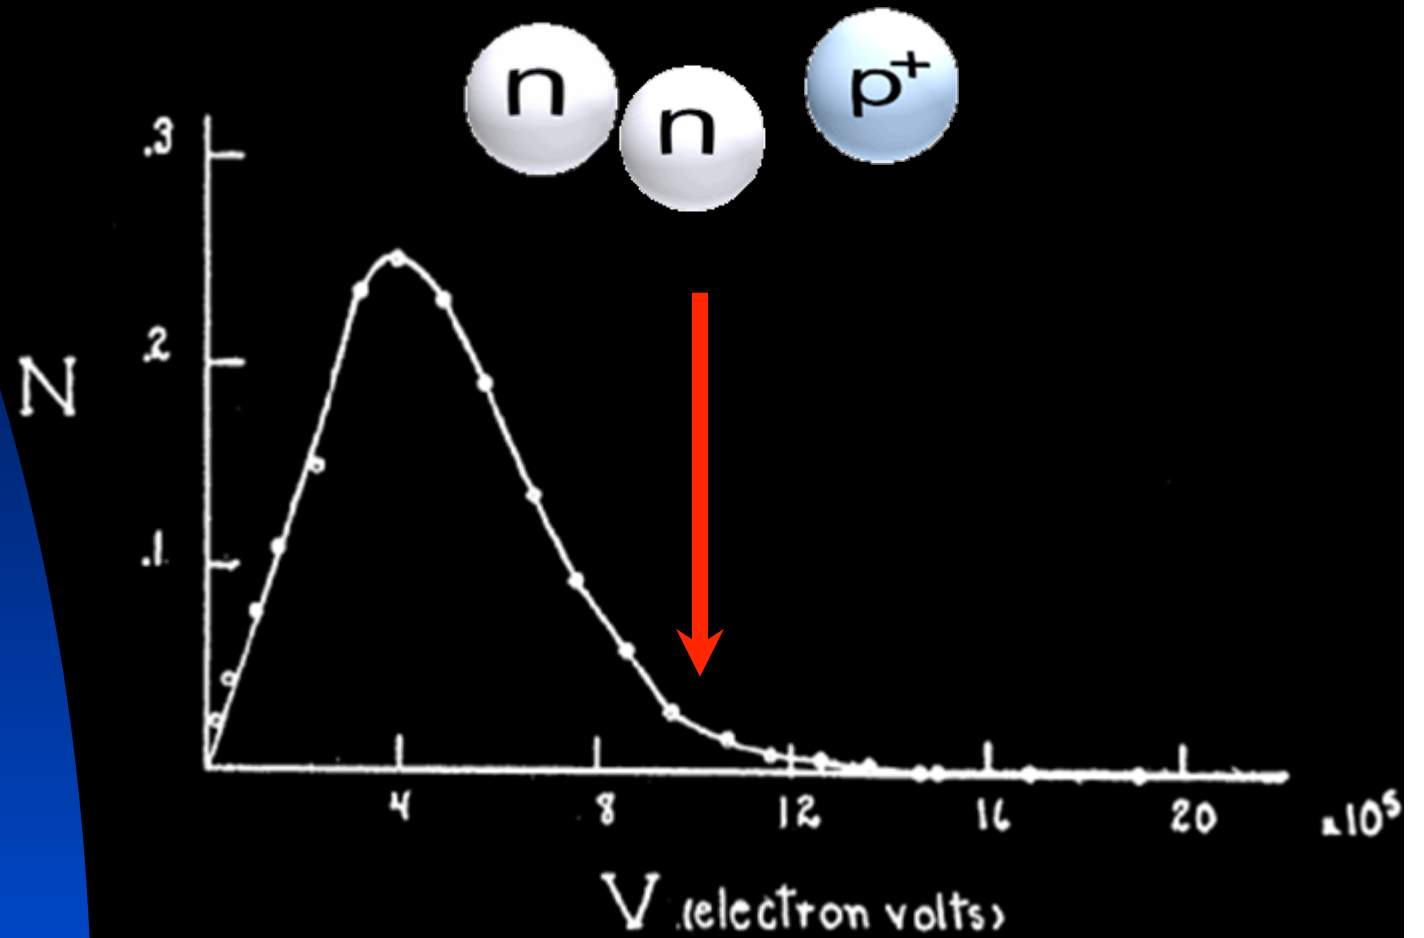

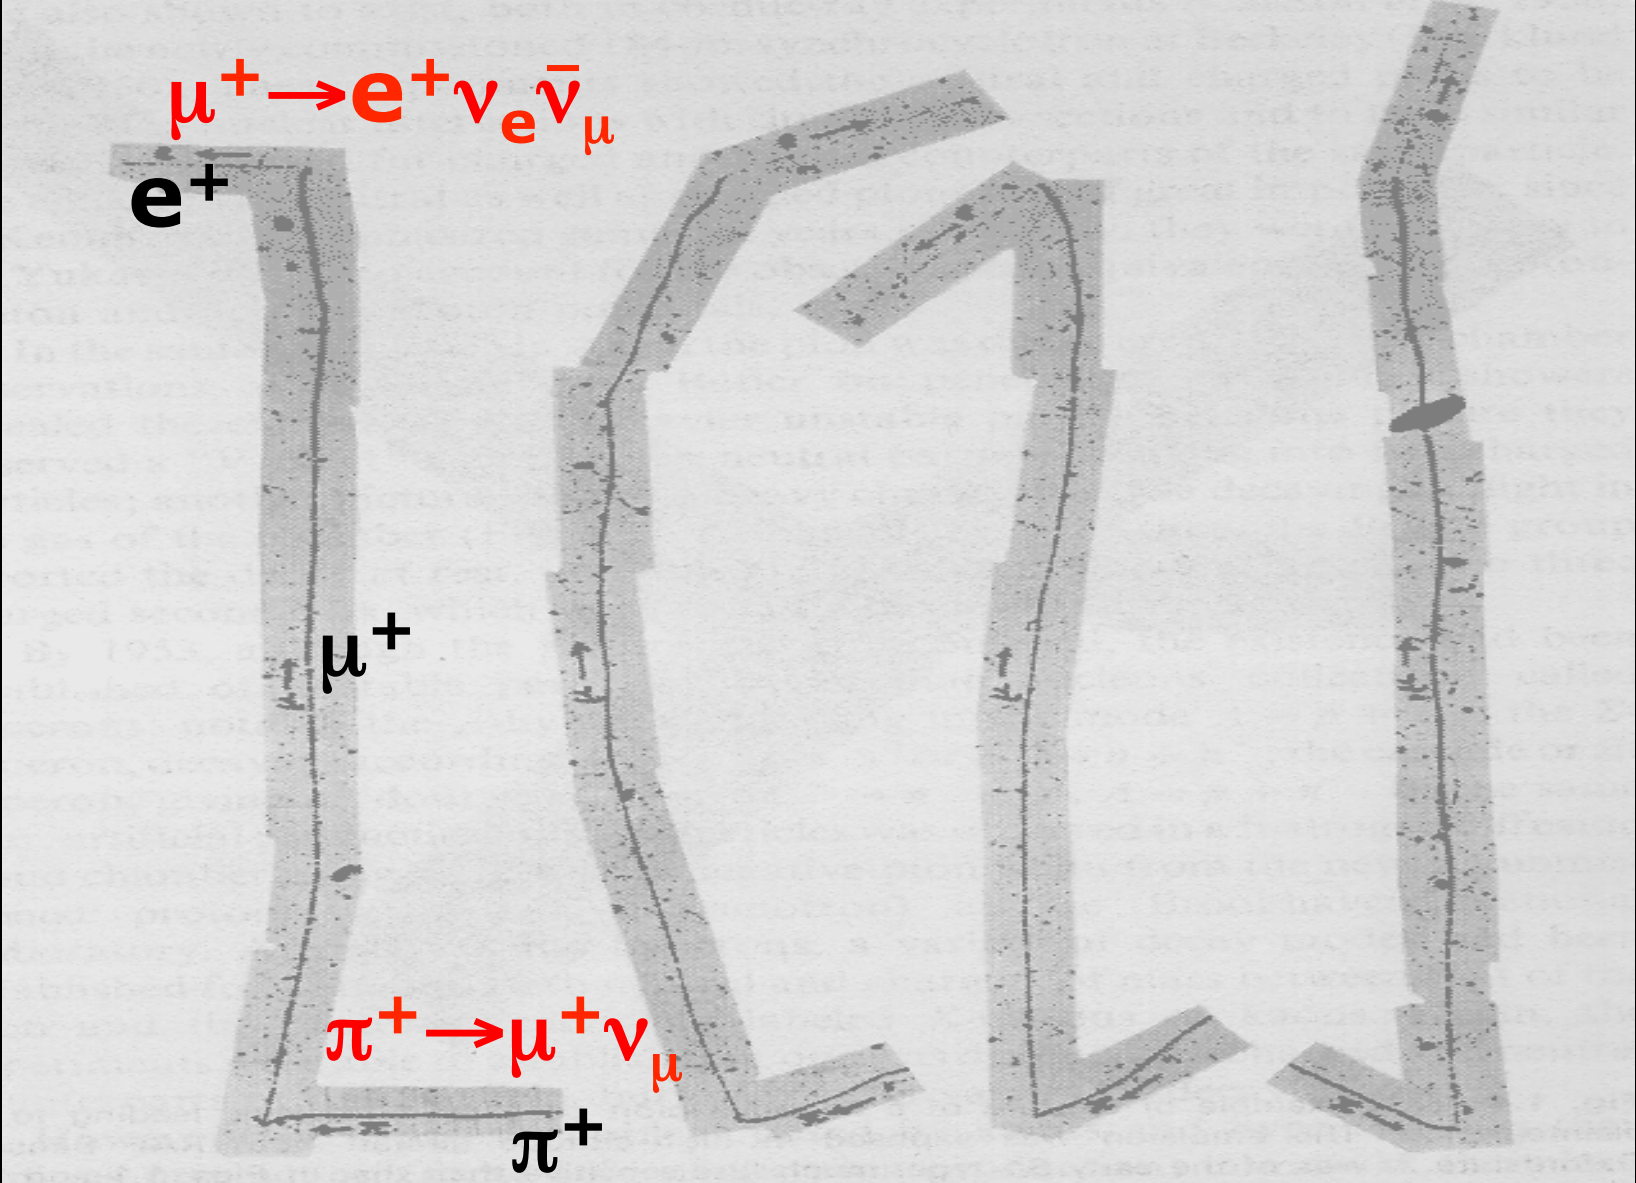

Particle instability: *decay*

Remco Brantjes (NIKHEF)

Decay

Lifetime \leftrightarrow life expectation

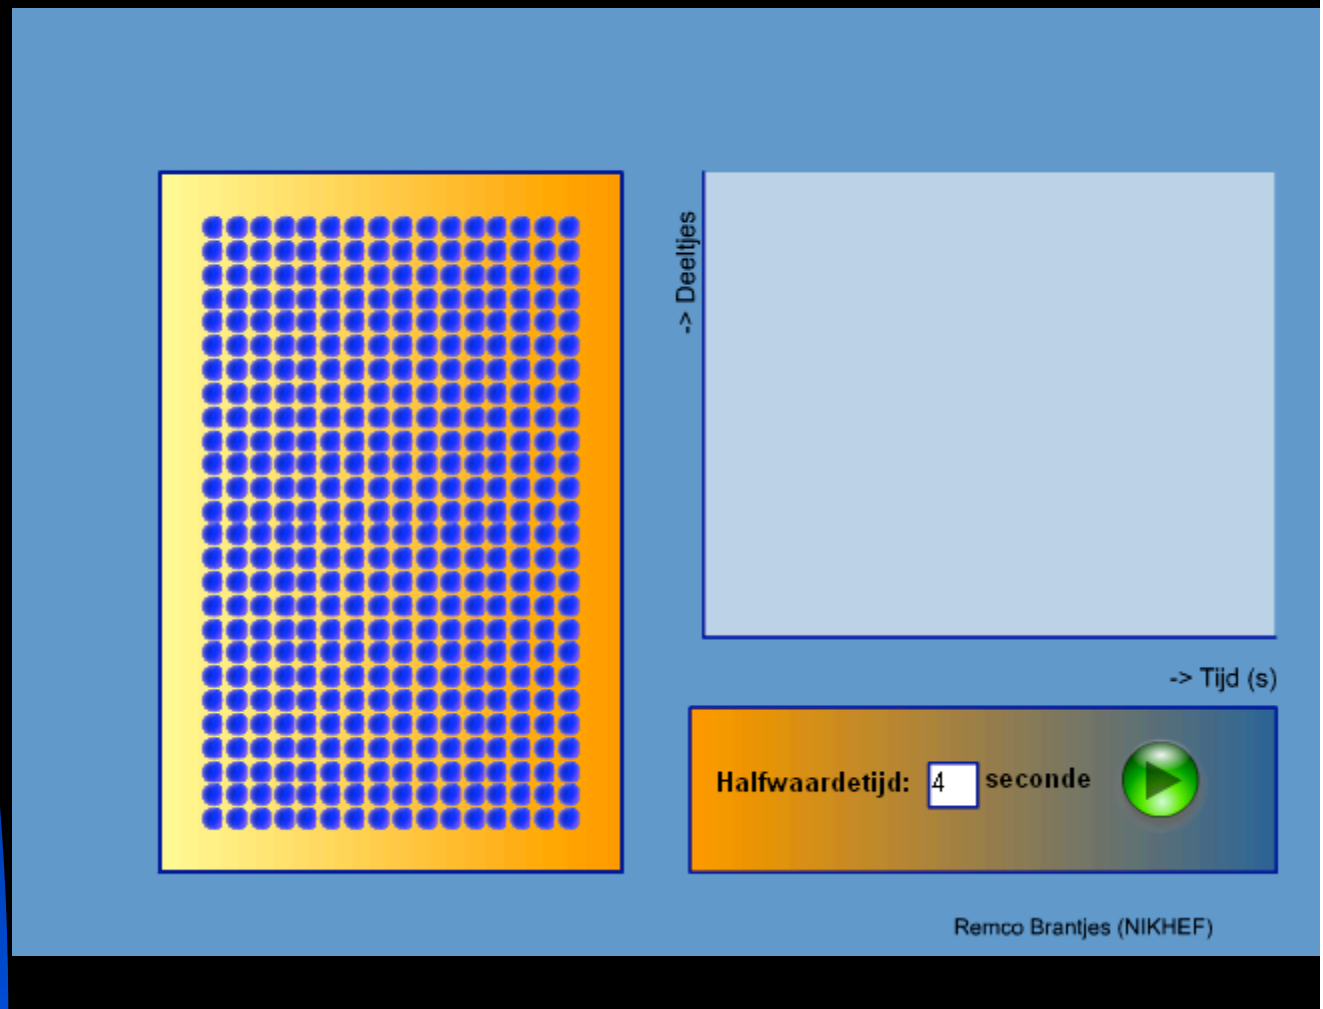

Unstable particles: *lifetime*

note:

As opposed to human beings, decay probability of an unstable particle does not depend on how long it lived already i.e. its past history!

simple!

The simulation interface consists of several components:

- Particle Container:** A vertical rectangular box with a yellow-to-orange gradient background, containing a grid of blue dots representing particles.
- Graph Area:** A large, empty light blue rectangular area to the right of the container, labeled with a vertical axis " \rightarrow Deeltjes" (Particles) and a horizontal axis " \rightarrow Tijd (s)" (Time in seconds).
- Control Panel:** A horizontal bar at the bottom right with a brown-to-orange gradient background. It contains the text "Halfwaardetijd: seconde" and a green play button icon.
- Footer:** The text "Remco Brantjes (NIKHEF)" is located at the bottom right of the interface.

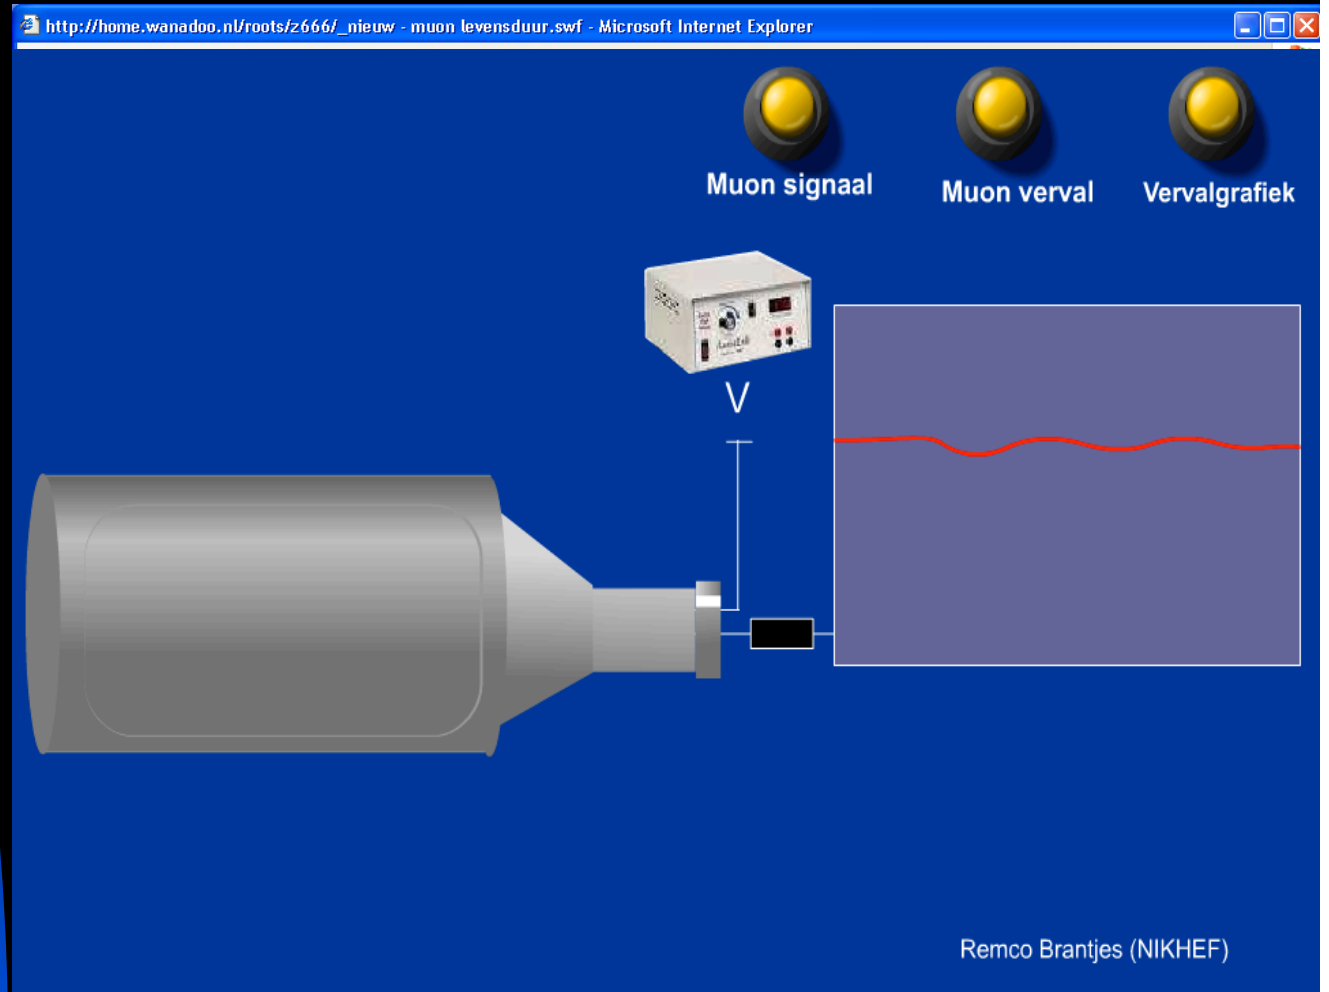

Actual experiment: *muon* (μ) lifetime

Start stopwatch:

Muon enters the detector.

Stop stopwatch:

Muon decays: generated electron triggers detector.

e

Value $1.602\ 176\ 487 \times 10^{-19} \text{ C}$

Standard uncertainty $0.000\ 000\ 040 \times 10^{-19} \text{ C}$

Relative standard uncertainty 2.5×10^{-8}

Concise form $1.602\ 176\ 487(40) \times 10^{-19} \text{ C}$

1. Quantization of electric charge?

2. Origin of mass?

1897

Electron

Spin $\frac{1}{2}$
Charge -1
Lifetime ∞
Mass 0.511 MeV

1937

Muon

Spin $\frac{1}{2}$
Charge -1
Lifetime 2.2 μ s
Mass 106 MeV

1975

Tau

Spin $\frac{1}{2}$
Charge -1
Lifetime 290 fs
Mass 1770 MeV

2. Origin of mass?

$$(\mathcal{D}_\mu \phi)^\dagger \mathcal{D}^\mu \phi - \mathcal{V}(\phi) - \frac{1}{4} F_{\mu\nu} F^{\mu\nu}$$

$$\mathcal{D}_\mu \phi = \partial_\mu \phi - ie A_\mu \phi$$

$$F_{\mu\nu} = \partial_\mu A_\nu - \partial_\nu A_\mu$$

$$\mathcal{V}(\phi) = \alpha \phi^\dagger \phi + \beta (\phi^\dagger \phi)^2$$

$$\alpha < 0, \beta \geq 0$$

2. Origin of mass?

Quarks

Forces

Leptons

2. Origin of mass?

100 pp interactions/s
⇒ ongeveer 1 per 10 miljoen

data volume:
200 MB/s
⇒ 2 miljoen GB/year = 2 pB/year

Higgs

HIGGS BOSON

H

The **HIGGS BOSON** is the theoretical particle of the Higgs mechanism, which physicists believe will reveal how all matter in the universe get its mass. Many scientists hope that the Large Hadron Collider in Geneva, Switzerland will detect the elusive Higgs Boson when it begins colliding particles at 99.99% the speed of light.
