[About Nikhef](#)

The most frequently asked question

Posted on [15 December 2011](#) by [melissa](#)

By: Frank Linde, director Nikhef

A guaranteed question after all (ok, almost all) of my public lectures is: "What is the societal impact of ...?" In Tuesday night's Dutch talkshow "Pauw & Witteman" Jolande Sap (member of Dutch parliament) asked Robbert Dijkgraaf (chairman of the KNAW, the Royal Netherlands Academy of Arts and Sciences) exactly this question. I already saw it on Jolande's face while Robbert was giving his excellent explanation

Particle physics
expensive?

How much does it cost?

The cost for the machine alone is about 5 billion CHF (about 3 billion Euro). The total project cost breaks down roughly as follows:

Construction costs (MCHF)	Personnel	Materials	Total
LHC machine and areas*)	1224	3756	4980
CERN share to detectors	869	493	1362
LHC computing (CERN share)	85	83	168
Total	2178	4332	6510

$$\left. \begin{array}{l} 10,000 \text{ physicists} \\ \sim 40 \text{ years} \end{array} \right\} \frac{6 \times 10^9 \text{ €}}{10,000 \times 40} = \frac{15,000 \text{ €}}{\text{many year}}$$

Particle physics *matters*

THE USEFULNESS OF USELESS KNOWLEDGE

BY ABRAHAM FLEXNER

IS IT not a curious fact that in a world steeped in irrational hatreds which threaten civilization itself, men and women—old and young—detach themselves wholly or partly from the angry current of daily life to devote themselves to the cultivation of beauty, to the extension of knowledge, to the cure of disease, to the amelioration of suffering, just as though fanatics were not simultaneously engaged in spreading pain, ugliness, and suffering? The world has always been a sorry and confused sort of place—yet poets and artists and scientists have ignored the factors that would, if attended to, paralyze them. From a practical point of view, intellectual and spiritual life is, on the surface, a useless form of activity, in which men indulge because they procure for themselves greater satisfactions than are otherwise obtainable. In this paper I shall concern myself with the question of the extent to which the pursuit of these useless satisfactions proves unexpectedly the source from which undreamed-of utility is derived.

mental problems. I have no quarrel with this tendency. The world in which we live is the only world about which our senses can testify. Unless it is made a better world, a fairer world, millions will continue to go to their graves silent, saddened, and embittered. I have myself spent many years pleading that our schools should become more acutely aware of the world in which their pupils and students are destined to pass their lives. Now I sometimes wonder whether that current has not become too strong and whether there would be sufficient opportunity for a full life if the world were emptied of some of the useless things that give it spiritual significance; in other words, whether our conception of what is useful may not have become too narrow to be adequate to the roaming and capricious possibilities of the human spirit.

We may look at this question from two points of view: the scientific and the humanistic or spiritual. Let us take the scientific first. I recall a conversation

ICT

Scientists from the RAND Corporation have created this model to illustrate how a "home computer" could look like in the year 2004. However the needed technology will not be economically feasible for the average home. Also the scientists readily admit that the computer will require not yet invented technology to actually work, but 50 years from now scientific progress is expected to solve these problems. With teletype interface and the Fortran language, the computer will be easy to use.
